

BOTSA SRIHARSHITHA

Software Engineer Intern | **Java, Python, C++** | **Data Structures & Algorithms** | **Distributed Systems**

+91 9676039334 | harshabotsa13@gmail.com | linkedin.com/in/sriharshitha-botsa | github.com/SriHarshitha137 | Visakhapatnam, India

PROFESSIONAL SUMMARY

Computer Science & Engineering undergraduate (graduating 2028) with a 9.17 CGPA (Top 5% of 200+ CSE students) and **strong Computer Science fundamentals, including object-oriented design, data structures, algorithm development, problem-solving, and complexity analysis** (180+ DSA problems solved). Hands-on **software engineering** experience building **REST APIs** and services across **distributed systems** using **Java, Python, JavaScript**, Node.js, and Express.js, with working knowledge of **C++, SQL and relational database concepts** (PostgreSQL/MySQL), and web frameworks including **React.js, Angular, Vue.js, HTML/CSS**. Comfortable navigating **ambiguous or undefined problems**, thinking abstractly, and delivering optimized code through **automated testing** and **Agile/Scrum** workflows. A **self-starter** who thrives in **fast-paced** environments, communicates technical challenges clearly, and is eager to contribute to enterprise **cloud services** platforms like **Salesforce's** Customer 360 — taking full ownership of features end-to-end using Git & GitHub, code reviews, and cloud tooling (AWS, Docker).

TECHNICAL SKILLS

- Languages: **Java, Python 3, JavaScript (ES6+), C++, TypeScript, SQL**
- Web & Frameworks: **React.js** (hooks, functional components), **Angular, Vue.js**, Node.js, Express.js, **HTML5, CSS3, REST APIs**, Next.js
- Databases: **MongoDB, PostgreSQL, MySQL** — **relational database concepts**, Firebase Firestore, Redis
- Distributed Systems & Cloud: **Microservices, Distributed Systems, Cloud Services** (AWS EC2/S3), WebSockets, JWT/RBAC Auth, Docker, Kubernetes, GitHub Actions (CI/CD)
- Core CS & Practices: **Data Structures & Algorithms** (180+ solved), **Object-Oriented Design, Algorithm Development & Complexity Analysis, Automated Testing**, Debugging, Root-Cause Analysis, Code Reviews, **Agile/Scrum Software Engineering** practices, Git & GitHub
- Platforms of Interest: **Salesforce** Customer 360 Platform, enterprise **cloud services** ecosystems

EXPERIENCE

Full-Stack Developer Intern | Tiesverse

April 2026 – July 2026

- Building and shipping **REST API** features and reusable Node.js / React.js UI components within a **distributed**, 75+ tool document-processing platform, translating stakeholder requirements into production-grade functionality using strong **problem-solving** and **abstract thinking** to navigate **ambiguous requirements**.
- Integrating frontend with backend **REST APIs** and asynchronous task queues (Celery + Redis) across **distributed** services, handling non-blocking data flows for high-throughput workloads and debugging production issues to improve application performance.
- Collaborating through **Agile/Scrum** ceremonies, sprint planning, and code reviews using Git & GitHub feature-branch workflows; contributing to **automated testing** practices and taking ownership of features across the full **software engineering** lifecycle in a **fast-paced** environment.

AI/ML Intern | Infosys Springboard Virtual Internship 7.0

July 2026 – Present

- Applying **Data Structures & Algorithms, algorithmic complexity analysis**, to my project AI INTERNSHIP APPLICATION AGENT and system-design principles to engineer end-to-end **Python** data pipelines, strengthening **problem-solving** and debugging skills directly applicable to **distributed-systems** logic.
- Writing clean, maintainable, well-documented, production-quality **Python** code and independently incorporating mentor feedback to apply industry best practices — demonstrating curiosity, **self-motivation**, and ownership in an **ambiguous, fast-paced** learning environment.

Open Source Contributor | GirlScript Summer of Code 2026

May 2026 – Present

- Contributing to multiple open source repositories using React, Node.js, Angular and Git debugging, and documentation fixes via Git feature-branch workflows in a collaborative, **fast-paced** open-source environment (Global Rank 443), **effectively communicating technical challenges and proposed solutions** to a distributed team of global contributors.
- Refactored a **Python** Streamlit-based IPL analytics app (CricScope) into a dark-themed, responsive design system, applying **object-oriented design** principles to improve visual consistency and UI/UX across dashboards.
- Collaborated with global contributors via pull requests and code reviews on GitHub, applying best practices for maintainable, testable code and clear technical communication.

Infosys Springboard Pragati: Path to Future — Cohort 9

July 2026 – Present

- Selected for an industry-aligned program building future-ready technical and professional skills through structured mentorship, demonstrating curiosity, **self-motivation**, and the ability to thrive in a **fast-paced**, dynamic environment.
- Engaging in structured workshops on professional communication, independent **problem-solving** in **ambiguous or undefined** scenarios, and industry-readiness alongside a peer cohort.

PROJECTS

Sync Fission — AI-Powered Collaborative Learning Platform | *Node.js, Express.js, PostgreSQL, WebSockets, JWT/RBAC*
Sep 2025 – Oct 2025

- **Problem:** Students needed a real-time, multi-role platform to collaborate on learning content, but existing tools lacked secure, role-based access and fast data retrieval.
- **Solution:** Architected and built a Node.js/Express.js backend exposing **20+ REST APIs** with a **distributed** architecture, and implemented **object-oriented design** with JWT + RBAC authentication across **3 user roles** plus real-time WebSocket communication.
- **Impact:** Achieved **sub-100ms** query response times with **zero downtime**, delivering a smooth, reliable cross-device user experience.

SheShield — Real-Time SOS Alert Platform | Node.js, React.js, Firebase, WebSockets Jan 2026 – Feb 2026

- **Problem:** Users in low-connectivity areas needed a way to send emergency SOS alerts reliably, even during network outages.
- **Solution:** Engineered a Node.js backend with an offline-first, **distributed** architecture and real-time WebSocket alerts; led a **5-member team**, enforcing a Git feature-branch strategy with **95%+ automated test** coverage through **Agile** workflows and code reviews.
- **Impact:** Cut alert delivery latency by **~40%** with **zero data loss** during outages, and reduced merge-conflict resolution time by **60%**.

PayFlow — Secure Digital Payments Platform | Node.js, Express.js, MongoDB, OWASP Security Mar 2025 – May 2025

- **Problem:** A fintech wallet system needed secure, reliable transaction handling under concurrent load without a reusable, consistent UI.
- **Solution:** Engineered a Node.js/Express.js backend with MongoDB data modeling, applying **object-oriented design** and JWT + bcrypt authentication, plus a reusable React component library (**15+ components**) using functional components and hooks.
- **Impact:** Delivered reliable performance under concurrent load and cut UI development time by **40%**.

GigLedger — AI-Powered Financial Identity & Income Verification Platform | Node.js, MongoDB, REST APIs, Vercel, AI APIs Jan 2026 – Mar 2026

Live: <https://gig-ledger-income-tracking-tax-simp.vercel.app>

- **Problem:** Gig workers lacked a unified, verifiable way to track and reconcile income earned across multiple platforms for tax and identity purposes.
- **Solution:** Built and deployed a Node.js backend with **REST APIs** and MongoDB aggregating income across **4 gig-economy platforms** in a **distributed** system, with **algorithmic** income-reconciliation logic and asynchronous data flows for real-time verification.
- **Impact:** Reduced manual verification effort with an audit-ready, user-friendly UI, live at the link above.

Diamond Price Prediction — ML Regression Model | Python 3, Pandas, Scikit-learn, Data Processing 2025

- **Problem:** Raw diamond market data (54,000+ records) contained missing values and outliers, making accurate price prediction difficult.
- **Solution:** Engineered a polynomial regression model in **Python 3** over **54,000+ records**, using systematic feature engineering and **algorithm development**, plus automated data-cleaning and preprocessing scripts to handle missing values and outliers.
- **Impact:** Achieved **R² = 0.9744** prediction accuracy, strengthening independent **problem-solving** and **complexity analysis** skills.

EDUCATION

B.Tech, Computer Science & Engineering | Anil Neerukonda Institute of Technology & Sciences, Visakhapatnam — CGPA: **9.17/10.0 (Top 5% of 200+ CSE students)** | 2024 – 2028

Intermediate (MPC) — 97% | Tirumala Junior College, Visakhapatnam | 2022 – 2024

School: Sri Bhavani Vidyaniketan — 96.1% | 2021 – 2022

CERTIFICATIONS

- **SQL and Relational Databases 101** — IBM Skills Network / Cognitive Class (2026) | Foundations of Prompt Engineering — AWS Training & Certification (2026)
- **Data Structures & Algorithms** — APNA College (2025) | Full Stack Web Development — APNA College (2025)
- **Programming in Java (Object-Oriented Programming)** — NPTEL (2025) | Artificial Intelligence — IBM SkillsBuild (2026)
- Cloud Business Jumpstart — Oracle (2026)

ACHIEVEMENTS & EXTRACURRICULARS

- Solved 180+ **Data Structures & Algorithms** problems on LeetCode/GeeksforGeeks, demonstrating strong independent **problem-solving** and debugging skills.
- Shipped 6 production-grade **software engineering** projects spanning **distributed** backend engineering, fintech, and applied **Python ML**, each emphasizing **REST APIs**, reliability, and performance.
- Top 5% academically (9.17 CGPA) among 200+ B.Tech CSE students; simultaneously interning at Tiesverse and Infosys Springboard while contributing to open source — demonstrating strong ownership and time management in a **fast-paced** environment.
- Ranked 443 among global contributors in GirlScript Summer of Code 2026, reflecting consistent, high-quality debugging and Git & GitHub collaboration on a large-scale open-source codebase.
- Earned 5+ industry certifications spanning cloud (AWS, Oracle), **SQL/relational databases** (IBM Skills Network), and full-stack development (APNA College).
